### IAPMO R&T Goes Paperless

Ontario, CA (August 17, 2007) — The need for massive amounts of paperwork during the product listing process is now a thing of the past, thanks to IAPMO Research and Testing (R&T). As part of long-term initiatives to better serve companies with product listing needs, IAPMO R&T has converted all paper files into LaserFiche files.

This latest innovation in product listing allows clients to securely track online the progress of their product through the listing process. The new software supports indexing of the listing files and provides immediate access to documents that, in the past, were handled manually. When questions arise, the necessary documents are quickly available for review.

“We have found that our customers appreciate the value of how quickly we can process their listing application,” said Shahin Moinian, senior director of IAPMO R&T. “We understand the pressure the manufacturers are under to bring products to the market on a timely basis.”

“We have worked for more than three years and invested significant resources to streamline the process and ensure that any changes we have made are seamless to the client,” Moinian said. “These changes have not impacted the thoroughness of the listing process. One of the simple things we have included is electronic signatures when we audit a manufacturer’s facility. The document trail is unbroken; we have just made all of the pieces work together more smoothly,” he continued.

Understanding customers’ need for rapid product listing enhances their time to market. With global capabilities, IAPMO R&T can accommodate all of its customers’ plumbing and mechanical product listing needs with efficiency and speed. Visit IAPMO R&T online at [www.iapmo.org/rnt](http://www.iapmo.org/rnt) for more innovations in product listing.
